

# BAKCOU

**ELEVATE YOUR GAME**

## A WORD FROM OUR OWNERS

Our company was founded on a few basic principles. First, was our love for the back country and the desire to access these remote areas with minimal disturbance to wildlife and their habitat through quiet and non-pollutant means.

Second, was to design and build the most durable and efficient, yet affordable, electric bikes on the market. Our goal wasn't to create a mountain bike conversion kit by simply adding a motor to a bicycle frame that wasn't designed and intended to operate with one. Instead, we designed the bike around the motor and the drive train with the necessary framework and durability needed to withstand the abuse and demands placed on it, and then included a comprehensive warranty to stand behind it.

Third, Bakcou was built by sportsmen and outdoor enthusiasts for those that want the same thing we do, which is to climb higher, go farther and explore more without adding more stress to the environment. Come join us, get out and enjoy the back country like you've never done before!

Bryan Child, Owner

David Andre, Owner

# THE BAKCOU DIFFERENCE

# 1 THE BAFANG ULTRA MOTOR

The Bafang Ultra motor is widely recognized as the “diesel engine” of mid-drive motors! It’s all metal, heavy-duty gearing, combined with the intelligence of an integrated torque sensor, make the Ultra motor the most capable, durable, and efficient motor on the planet. The Ultra motor is also referred to as a “smart motor”. The speed, cadence, shift, brake, and torque sensors provide continuous feedback from the rider to the motor. This allows the motor to deliver exactly what you ask. What you get, is a very natural feeling ride, even while providing a tremendous amount of torque and power output. Test ride one today, and see for yourself, why the Bafang Ultra motor is in a class of its own!

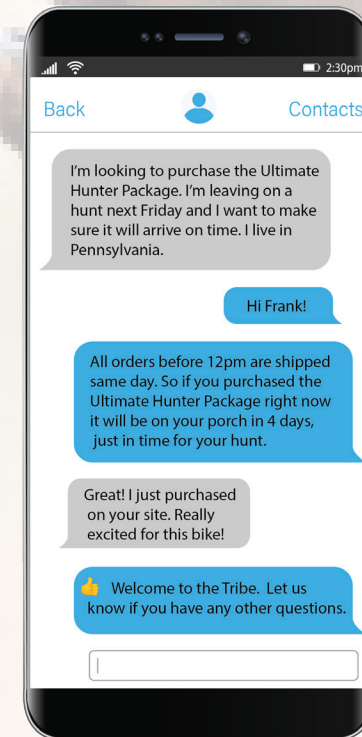

## 2 LONG-LASTING LITHIUM ION BATTERIES

Not all batteries are created equal. There's a reason you can purchase a 9v battery for \$3, or one for \$10 at your local grocery store. It all boils down to battery composition, capacity, and efficiency. Bakcou utilizes only high end lithium ion cells created to hold a charge for a longer period of time. They are hand selected to create optimal torque, and greater distance, with each charge.

## 3 CUSTOMER SERVICE

Customer service is at the center of our business model. We aren't happy, if our customers aren't happy! We are committed to the design and manufacturing of the best electric bicycles, bicycle components, and related products on the market. We are uncompromising in our materials, process of manufacturing, development of new products, and innovation of the highest quality. We expect the best from our products and we're here to help make sure that's what you get.

# 4 HIGH END COMPONENTS

We recognize that it's not only important to build a fat-tire, electric, hunting bike around a bulletproof aluminum alloy frame, motor, and battery. It's just as important to top it off with high-end components that allow it to perform the way you expect it to.

It's all in the details and that's why we use wide handlebars and locking handle grips for a greater base of support. We use wide stance, deep cleated pedals with wide holes to grip your boots and avoid accumulation of mud or snow. Our color LCD display allows for ease of use when flying down the trail, while the unparalleled traction and control of our Maxxis Minion fat-tires, allow you to go where you want to go.

From our top of the line air-suspension forks to our drivetrain components, we've got you covered.

**ELEVATE**  
**YOUR GAME**

## QUALITY

Bakcou is committed to the design and manufacturing of the best electric bicycles, bicycle components, and related products on the market. We are uncompromising in our materials, process of manufacturing, development of new products, and innovation of the highest quality.

## STEALTH

Move quicker, quieter, and scent free from one hunting spot to another. This means a more successful hunt. After you hunt on a Bakcou eBike, you'll wonder how you ever did it before without one.

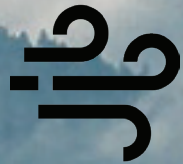

## ACCESS

Bakcou eBikes are built by sportsmen and outdoor enthusiasts for those that want the same thing they do, which is to climb higher, go farther and explore more without adding stress to the environment.

## ENERGY

Whether your hunt takes you across snow, mud, rock or sand on steep climbs, or technical terrain, our Bakcou eBike will get you and your gear in and out, with plenty of energy to spare.

## SCENT

Every hunter knows that it's all about scent and the wind! Our elite, fat-tire, electric, hunting bikes keep your boots off the ground and help you to control perspiration. This means less scent in the field, and a higher probability of getting in on that trophy animal you've been targeting. Traverse those distant, hard to reach areas with ease while staying scent free.

# THE MULE

This beast is built to pack like a mule with the suspension and gearing to get you there fast. On a quick trail ride or a week in the backcountry, the Mule can handle anything you throw at it.

The Mule was designed and engineered around the unparalleled power and performance of Bafangs ULTRA mid-drive motor. The Ultra motor is widely recognized as the “diesel engine” of mid-drive motors! It’s all metal, heavy-duty gearing, combined with the intelligence of an integrated torque sensor, make the Ultra motor the most capable, durable, and efficient motor on the planet.

The Ultra motor is also referred to as a “smart motor.” The speed, cadence, shift, brake, and torque sensors provide continuous feedback from the rider to the motor. This allows the motor to deliver exactly what you ask. What you get, is a very natural feeling ride, even while providing a tremendous amount of torque and power output.

Test ride one today, and see for yourself, why the Bakcou Mule has been the #1 selling fat-tire eBike on the market for 2 years, and why this hardtail eBike is in a class of its own!

## MULE SPECS

- **Motor:** Bafang Ultra M620 750w/1000w mid-drive Motor w/integrated Torque Sensor
- **Battery:** Extended Distance 48v 14.5ah, 17.4ah, or 21ah lithium-ion
- **Range:** 40+ Miles (see “eBike Range Explained” under “Resources” on our website)
- **Digital Display:** Bafang DP C18.UART Full Color LCD
- **Brakes:** Powerful Tektro Dual Piston Hydraulic, 203mm Front & 180mm Rear rotor.
- **Suspension:** BCEB GT MRK 100mm AIR Fork
- **Frame:** High Grade Aluminum Alloy 6061
- **Size:** Mule, 18” (Stand Over Height: 29.5”)  
Mule ST, 18” (Stand Over Height: 26’)
- **Throttle:** Left Thumb
- **Wheels:** Quick Release Front Hub
- **Tires:** Unparalleled Traction and Control Maxxis Minion 26” X 4.0
- **Gearing:** Shimano Alivio Hill-Climbing 9 speed, 40t Front 11x36t cassette
- **Steering:** Wide 740mm Handlebars for Greater Stability
- **Load Capacity:** 300lbs
- Locking Ergonomic **Handlebar Grips**
- Shock Absorbing **Suspension Seat Post**
- Front & Side Rear Derailleur Guards
- **Saddle:** SR Sport Saddle
- Aggressive Skid-Proof Wide Stance Pedals
- **Weight:** 68 lbs
- **Top Speed:** 35+ mph

# THE STORM

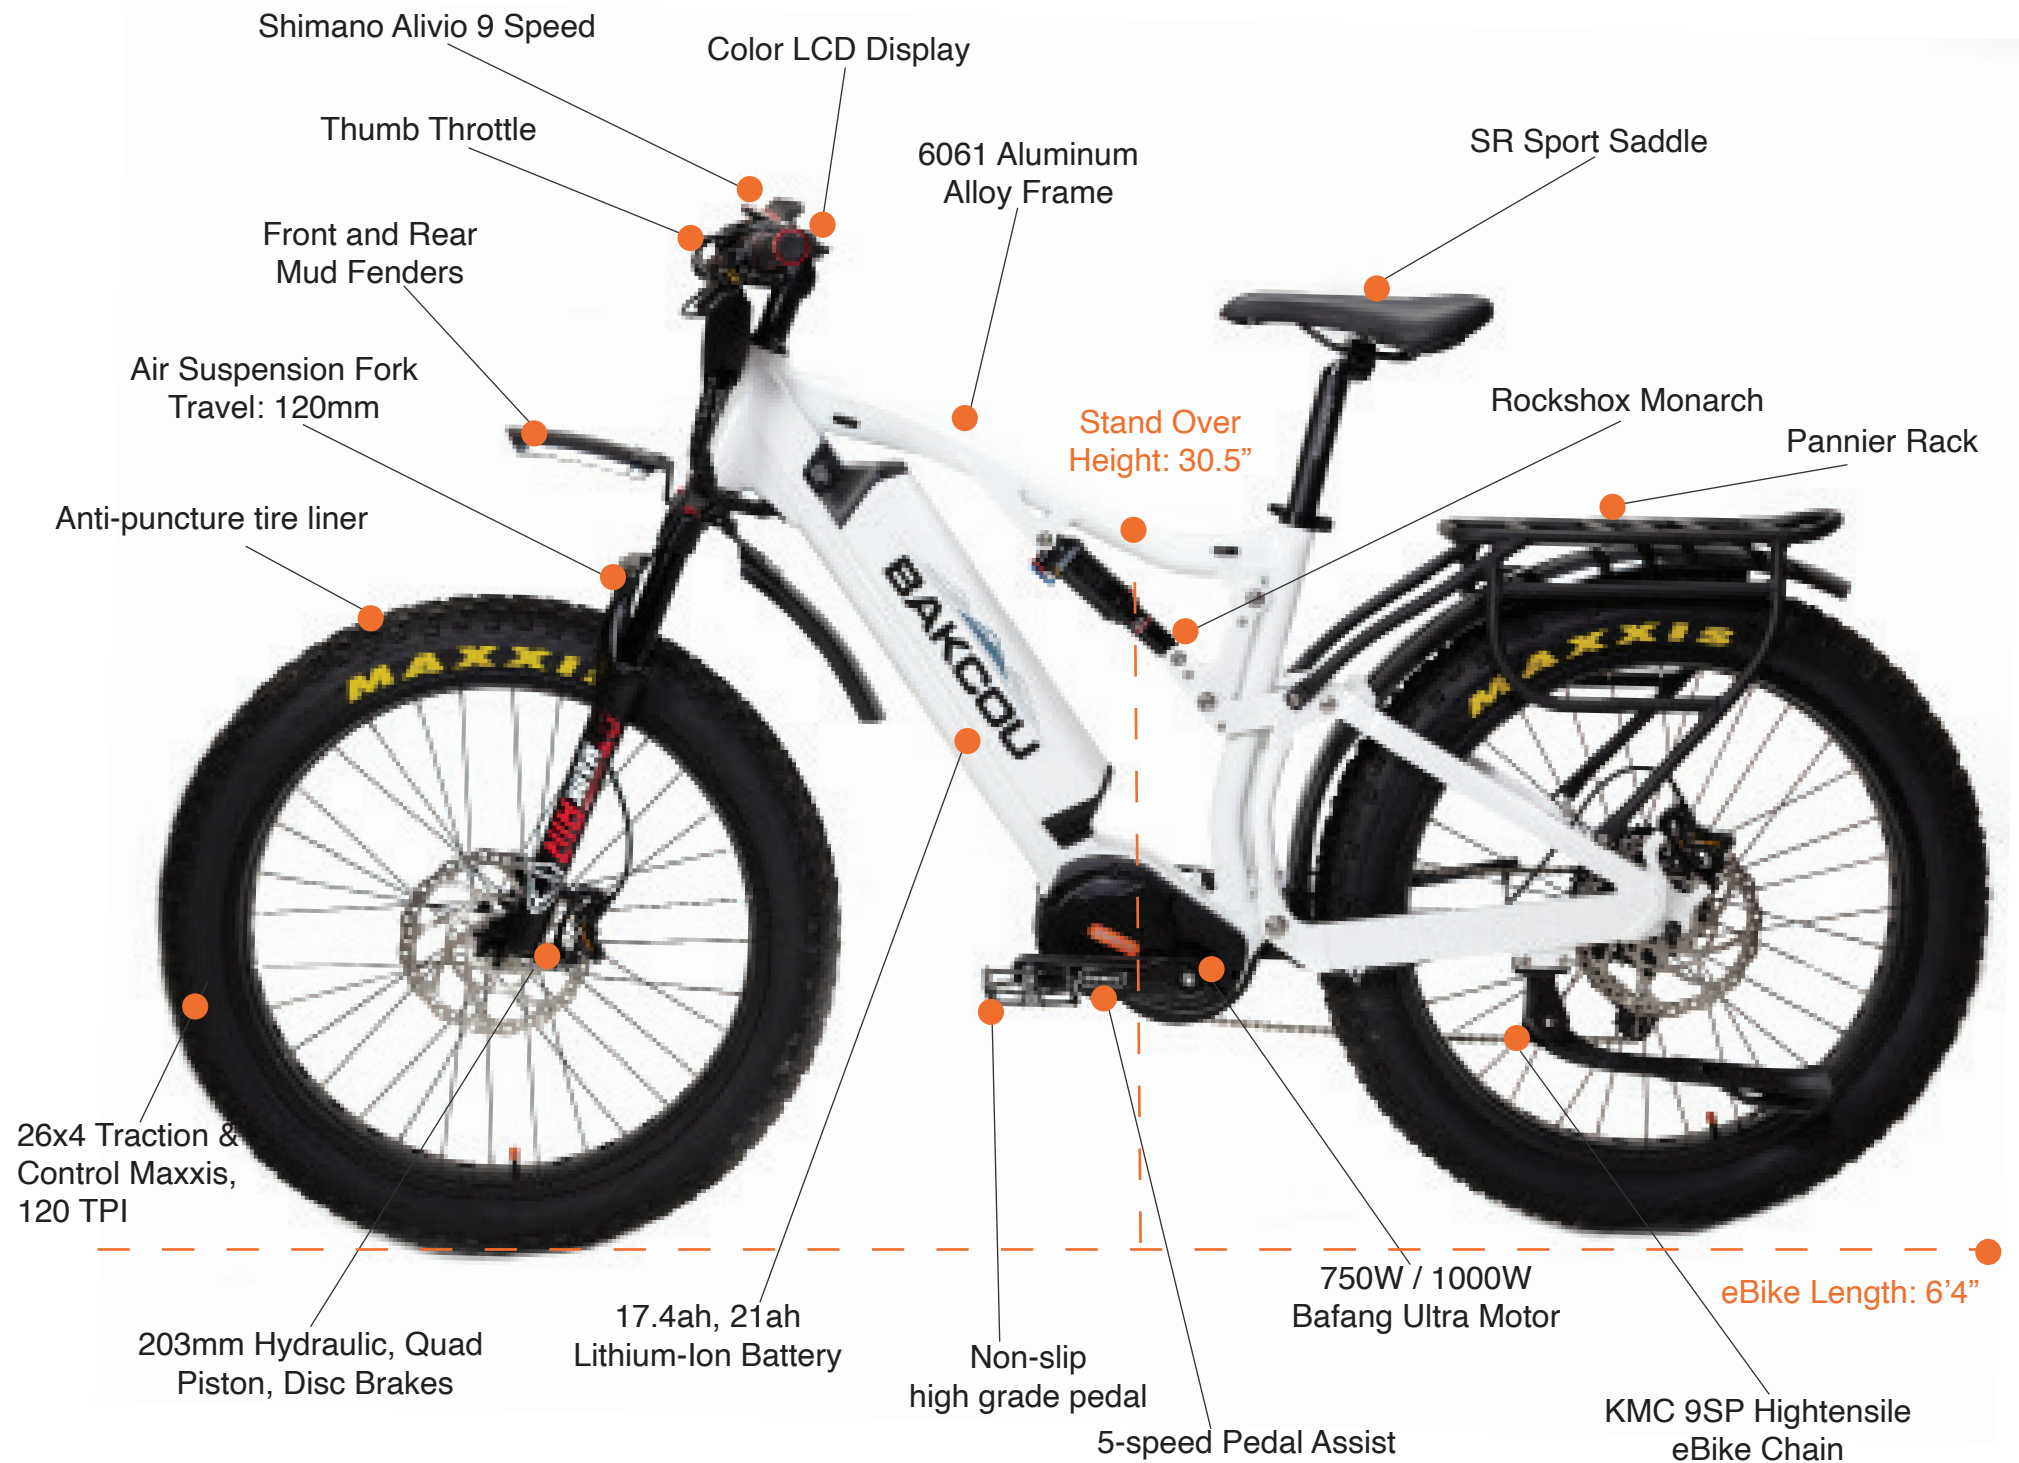

If it's gnarly, rugged, steep, or technical then look no further than the full suspension Storm G2. This bike will chew up those rocky climbs and steep descents with ease while still allowing you to pull that trailer full of gear to and from that tree stand, blind or favorite hunting spot.

The full-suspension Storm G2 was designed and engineered around the unparalleled power and performance of Bafangs ULTRA mid-drive motor. The Ultra motor is widely recognized as the "diesel engine" of mid-drive motors! For this reason, the rear suspension of the Storm G2 had to be just as heavy-duty, in order to handle all of this torque and power without causing the frame to flex under intense loads.

The all metal, heavy-duty gearing, of the Ultra motor, combined with the intelligence of an integrated torque sensor, make the Ultra motor the most capable, durable, and efficient motor on the planet and now there is a full-suspension bike to handle it.

The Ultra motor is also referred to as a "smart motor". The speed, cadence, shift, brake, and torque sensors provide continuous feedback from the rider to the motor. This allows the motor to deliver exactly what you ask. What you get, is a very natural feeling ride, even while providing a tremendous amount of torque and power output.

Test ride one today, and see for yourself, why the Bakcou Storm is currently the #1 selling full-suspension, fat-tire, ebike on the market, and why it's in a class of its own!

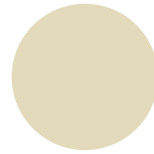

## STORM SPECS

# THE FLATLANDER

Sometimes that secret hunting spot sits at the end of a long cornfield, miles downstream at the bend in the river, or maybe in those hard to reach cattails on the distant horizon. If that's the case, then the Flatlander is the bike for you!

We recognize that not every hunt begins at the top of the mountain. For this purpose Bakcou has taken all of the high-end components of the Mule and Storm, and engineered a hunting tool for those that hunt the flatter ground, and at a price point that won't break the bank.

We combined the power and performance of Bafangs 750w, high-end, rear hub motor, with the same bullet proof aluminum alloy frame, and high-end components, that you expect in a Bakcou fat-tire, electric, hunting bike and created the Flatlander.

As with each of our hunting eBikes, it's all in the details and that's why we use wide handlebars and locking handle grips for a greater base of support. We use wide stance, deep cleated pedals, with wide holes to grip your boots and avoid accumulation of mud or snow. Our color LCD display allows for ease of use when flying down the trail, while the unparalleled traction and control of our Maxxis Minion fat-tires, allow you to go where you want to go. From our top of the line air-suspension forks to our drivetrain components, we've got you covered.

# WHICH BIKE IS RIGHT FOR ME?

## MULE

When trying to decide which bike is right for you, it really comes down to application. If you plan to hit the trail with a loaded down rear pannier rack, while pulling a trailer full of gear for a week of hunting or adventure in the back country, then we recommend our hard-tail Mule. The Mule is built to pack! By design, this heavy duty 6061 aluminum alloy hard tail frame will maintain its integrity even when placed under **heavy loads**. While the air suspension GT MRK front forks and suspension seat post create a comfortable ride they cannot replace the high end full suspension ride of the Storm.

## STORM

If your plans are to hunt rough, rugged, gnarly terrain, with a pack on your back, and you are less interested in packing heavy gear on your bike, or pulling weighted down trailers, then the full suspension Storm is right for you. The full suspension Storm delivers a **Cadillac ride** while traversing even the most rugged terrain. However, weighing down a full-suspension bike with heavy gear can cause the rear end to squat, (even when the rear shock is locked out) changing the way it rides and performs. While the Storm utilizes the same, bullet-proof Bafang Ultra mid-drive motor, with it's heavy duty metal gearing and diesel engine like construction, we recommend it more for day trip hunting when a smooth ride is top priority.

## FLATLANDER

We recognize that not every hunt begins at the top of the mountain. For this purpose Bakcou has taken all of the high-end components of the Mule and Storm, and engineered a hunting tool for those that hunt the **flatter ground**, and at a price point that won't break the bank. We combined the power and performance of Bafangs 750w, high-end, rear hub motor, with the same bullet proof aluminum alloy frame, and high- end components, that you expect in a Bakcou fat-tire, electric, hunting bike and created the Flatlander.

## MULE OR FLATLANDER STEP-THROUGH MODELS

We recommend our Mule and Flatlander Step-Through (ST) models for our customers with a shorter leg length, or those that have difficulty getting on and off of a traditional fat-tire, eBike. The Mule ST and Flatlander ST are built exactly like the Mule and Flatlander, with the exception of a lower top tube allowing for a **shorter stand over height**. This allows for greater ease in getting on and off of the bike.

# TESTIMONIALS

“

*Bakcou eBikes are incredible! They change the way you hunt elk and add a fun level to your hunt. They are tough and robust. It opened up new areas to us that may not have been accessible otherwise. I can't say enough about them.*

*-Corey Jacobsen  
Elk 101 (Destination Elk V2: Episode 16)*

”

“  
These things truly are a game changer. I've been riding these eBikes for 3 seasons now and the team at Bakcou has done amazing work to make these an elite eBike. The gearing, the motor and braking system are all top-notch. It's been a huge factor to my success out in the backcountry.

-Paul Servey, @mountaingoatpaul 

“  
I just purchased the Mule 1000 and I am IN-LOVE with this thing! I did a ton of research on e-bikes, e-bike manufactures, components, etc... And, I chose Bakcou for several reasons. The biggest reason is that they are designed by actual-hunters, for actual-hunters. These guys hunt the same mountains that I do, so they know exactly what a hunter would need from an e-bike and these bikes are SO-SOLID... they have hunter-focused features that no one else has that makes this bike perfect for me (or anyone, really) and what I need it for. Also - The staff are all very nice and extremely helpful and everyone I have met and worked with are just all-around Good people! My wife (who was very skeptical at first...) is now in love too and wants one of her own! :)

-Matt Toyn, @hunters\_tactica 

# TRAILERS

## Hunting Cargo Trailer

- Quickly attaches or releases from the rear axle of eBike
- Only as wide as the bike itself thus making it ideal for use on tight, single track trails
- 20" x 4" fat-tire
- Cargo area: 16.5" W x 28" L x 12" H
- Total length: 80" (64" from back tire when attached to bike)
- Weight: 29lbs
- 50-90 lbs capacity depending on trail

## Folding Cargo Trailer

- Quickly attaches or releases from the rear axle of bike
- 20" x 3" fat-tires
- Cargo area: 16.5" W x 40.5" L x 10" H
- Outside of wheel width: 30"
- Total length: 70" (50" from back tire when attached to bike)
- Weight: 42lbs
- 150 to 250lbs capacity depending on trail
- Quick release axles

## Folding Deer Trailer

- Quickly attaches or releases from the rear axle of bike
- Use as handcart to retrieve game and then easily attach to bike
- 16" x 3" fat-tires
- Dimensions: 18" W x 48" L
- Outside of wheel width: 27"
- Total length: 72" (60" from back tire when attached to bike)
- Weight: 25lbs
- 150 to 200lbs capacity depending on trail
- Quick release axles

# ACCESSORIES

## Dual Use Pannier Bag

Comes as a set (two pannier bags and a backpack strap).

- Waterproof panniers (pair) with roll-top closure
- Easily converts into backpack for quick transition from biking to hiking
- Lightweight, sturdy, anti-puncture, heavy canvas fabric stands up to weather and abuse
- Three clamp system to ensure tight fit to pannier rack eliminating bag swing or movement
- Highly reflective Bakcou logo to aid in visibility of bag/bike when returning after dark
- Gear Capacity = 20 liters
- Gear Capacity = 1,221 cubic inches
- Weight Limit = 22 Pounds per bag
- Note: In order to meet waterproof standards the roll-top lid must be rolled 3-4 times

## Gator Gripp HD Bow Rack

Gator-Gripp HD Bow/Gun Rack eliminates the repetitious feat of inserting and removing your bow or gun through the use of rubber cords, Velcro or other gizmos.

- Just pull the strap, the jaws open and insert your bow, gun or fishing pole
- Grips Independently and Auto Adjusts to your Equipment
- Rugged Powder Coated Steel Construction – No Plastic

## 200 Watt Solar Panel

Harness the energy of the sun to give you an endless supply of power. With a clear view of the sun, charge a 14.5ah battery within 4-5 hours.

- 55" x 44" x 1/4" open
- 15" x 19" x 1.5" closed
- 200w 48v,60v,72v adjustable controller
- 14 lbs
- 4-5 hours for a full charge

## Puncture Proof Tire Liners

These heavy-duty puncture proof tire liners add an extra layer of protection for thorns and sharp objects to keep you moving down the trail.

Easily install liner by inserting between the tube and tire.
